Great info Mike. Thanks! Plan on collecting samples tomorrow unless Susan Webster calls you. We will work out future sampling schedule tomorrow.

We were able to collect 3 surface water samples and 3 sediment samples (surface water and sediment samples were collocated). They were all on the Gulf side of the delta. A map with our locations is being produced right now and will follow in separate email.

All samples were shipped out to the labs about 2 hours ago.

We detected an odor and sheen (very small amounts) at the last sampling location.

We currently have 10 START members working here. We have 2 more START coming tomorrow. This should be adequate for now based on the amount of sampling work on-going.

The question we have is whether we should plan to do routine daily water/sediment sampling out on the Gulf shoreline.... please advise.

Mike

- 3 water samples were collected and shipped
- we are confirming about the sediment samples
- Monitoring data is being uploaded tonight at 1030. It will be available on scribe.net

John/Paige,

Spoke with Tito and Kevin. For the 7am update we can provide them a few bullets this evening on things that have happened since the 3pm report and they will include in morning report.. Recommend we confirm and send the following tonight:

- 3 water and 3 sediment samples collected
- Dispersant test initiated
- Monitoring data available on Scribe.net

Anything else?.... John will you confirm and send to Tito, Kevin and Sam Coleman with a copy to me, Mark, Susan and Chris. Thanks
